1. General Description

LM215WF3 is a Color Active Matrix Liquid Crystal Display with a Light Emitting Diode (White LED) backlight system without LED driver. The matrix employs a-Si Thin Film Transistor as the active element.

It is a transmissive type display operating in the normally black mode. It has a 21.5 inch diagonally measured active display area with FHD resolution (1080 vertical by 1920horizontal pixel array) Each pixel is divided into Red, Green and Blue sub-pixels or dots which are arranged in vertical stripes. Gray scale or the brightness of the sub-pixel color is determined with a 8-bit gray scale signal for each dot, thus, presenting a palette of more than 16,7M colors with A-FRC (Advanced Frame Rate Control). It has been designed to apply the 8Bit 2 port LVDS interface. It is intended to support displays where high brightness, super wide viewing angle, high color saturation, and high color are important.

General Features

Active Screen Size	21.5 inches(54.61cm) diagonal
Outline Dimension	497.6(H) x 292.2(V) x 10.5(D) mm
Pixel Pitch	0.08265*RGB(H)mm x 0.24795(V)mm
Pixel Format	1920 horiz. By 1080 vert. Pixels RGB stripes arrangement
Color Depth	16,7M colors (6bit + A-FRC)
Luminance, White	250 cd/m ² (Center 1 Point, Typ.)
Viewing Angle(CR>10)	View Angle Free (R/L 178(Typ.), U/D 178(Typ.))
Power Consumption	Total 9.8W (Typ.) 3.0W @VLCD, 6.8W @Is=70 mA
Weight	(1685g)(Typ.)
Display Operating Mode	Transmissive mode, normally black
Panel Type	Reverse Type
Surface Treatment	Anti-glare treatment of the front polarizer (Haze 25%, 3H)

2. Absolute Maximum Ratings

The following are maximum values which, if exceeded, may cause faulty operation or damage to the unit.

Table 2-1. Absolute Maximum Ratings

Parameter	Symbol	Values		Units	Notes
		Min	Max		
Power Supply Input Voltage	V_{LCD}	-0.3	+6.0	V_{DC}	At 25°C
Operating Temperature	T_{OP}	0	50	°C	1,2,3
Storage Temperature	T_{ST}	-20	60	°C	
Operating Ambient Humidity	H_{OP}	10	90	%RH	
Storage Humidity	H_{ST}	10	90	%RH	
LCM Surface Temperature(Operation)	$T_{surface}$	0	65	°C	1,4

Notes:

- 1) Temperature and relative humidity range are shown in the figure below.
Wet bulb temperature should be 39°C Max, and no condensation of water.
- 2) Maximum storage humidity is up to 40°C, 70% RH only for 4 corner light leakage mura.
- 3) Storage condition is guaranteed under packing condition.
- 4) LCM surface temperature should be measured under the condition of $V_{LCD} = Typ$, $f_v = 60Hz$, $T_a = 25°C$, no humidity and typical LED string current.

- * f_v = Frame frequency
- * T_a = Ambient temperature

3. Electrical Specifications

3-1. Electrical Characteristics

It requires two power inputs. One is employed to power the LCD electronics and to drive the TFT array and liquid crystal. The second input power for the LED/Backlight, is typically generated by a LED Driver. The LED Driver is an external unit to the LCDs.

Table 3-1. Electrical Characteristics

Parameter	Symbol	Values			Unit	Notes
		Min	Typ	Max

Power Consumption	Pc_Mosaic	-	3.0	3.75	Watt	2
	Pc_White	-	3.8	4.7	Watt	3
Rush current	IRUSH	-	-	3.5	A	4

Notes:

- 1) Permissive power ripple should be measured under the condition of V_{LCD} = Typ, 25±2℃, f_v = Max.
Refer to page 7 for the pattern and more information.
- 2) The specified current and power consumption can be measured under the V_{LCD} = Typ, 25±2℃, f_v = 60Hz and the pattern should be changed according to the typical or maximum power condition.
The max. current can be measured only with the maximum power pattern and the max. current is based on the peak value using oscilloscope, not the RMS value. See the page 7 for details.
(Measurement condition : Sample Mode, Time division 40ms, Sampling Rate 2.5MS/s)
- 3) Maximum condition of inrush current:
The duration of rush current is about 5ms and rising time of power input is 500us ±20%.(Min).
- 4) V_{LCD} level must be measured between two points on PCB of LCM V_{LCD}(test point) ~ LCM Ground.
(Test condition: Maximum power pattern, 25℃, f_v = 60Hz)

* f_v = Frame frequency

Power Consumption	PBar	-	6.8	7.3	Watt	2, 5
LED Life Time	LED_LT	30,000	-	-	Hrs	4

Note : The LED Bar consists of 34 LED packages, 2 strings (parallel) x 17 packages (serial)

Notes :

- 1) The specified values are for single LED bar.
- 2) The specified current is defined as the input current for single LED string with 100% duty cycle.
- 3) The specified voltage is the input LED string voltage at typical current 100% duty cycle.
- 4) The LED life time is defined as the when brightness of LED itself reach to the 50% of initial value under the conditions at $T_a = 25 \pm 2^\circ\text{C}$ and typical LED string current.
- 5) The power consumption shown above does not include the loss of external LED driver.
 The typical power consumption is calculated as $P_{\text{bar}} = V_s(\text{Typ.}) \times I_s(\text{Typ.}) \times \text{No. of strings}$.
 The maximum power consumption is calculated as $P_{\text{bar}} = V_s(\text{Max.}) \times I_s(\text{Typ.}) \times \text{No. of strings}$.

Notes:

- 1) All GND(ground) pins should be connected together to the LCD module's metal frame.
- 2) All V_{LCD}(power input) pins should be connected together.
- 3) All input level of LVDS signals are based on the EIA 644 standard.
- 4) ITLC is used for image sticking reduction in interlace mode.
 (L: Normal mode, H: Interlace image sticking reduction mode)
 This pin should be connected to GND in normal mode.
 (Low level Input Voltage : GND ~ 0.4V, High level Input Voltage : 1.6 ~ 3.6V)

3-3. Signal Timing Specifications

This is signal timing required at the input of the TMDS transmitter. All of the interface signal timing should be satisfied with the following specifications for it's proper operation.

Table 3-5. Timing Table

Notes :

- 1.The value of Hsync period, Hsync width and Hsync valid should be even number times of tCLK.
If the value is odd number times of tCLK, it can make asynchronous signal timing and cause abnormal display.
- 2.The performance of the electro-optical characteristics may be influenced by variance of the vertical refresh rates.
- 3.The value of Hsync Period, Hsync Width, and Horizontal Back Porch should be divided by 4 without a remainder.
4. The polarity of Hsync, Vsync is not restricted.

- Power sequence should be kept all the time including below cases for normal operation.
 - AC/DC Power On/Off
 - Mode change (resolution, frequency, timing, sleep mode, color depth change, etc.)
 The violation of power sequence can cause a significant trouble in display and reliability.
- Please avoid floating state of interface signal during signal invalid period.
- When the interface signal is invalid, be sure to pull down the V_{LCD} (0V)
- Please turn off the power supply for LED when the level of V_{LCD} changes to prevent noise issue.
- When measuring valid data starting point, it can be measured that LVDS signal starts swing.

Notes:

- 1) **Contrast Ratio(CR)** is defined mathematically as: **(By PR880)**
 It is measured at center point(1)

$$\text{Contrast ratio} = \frac{\text{Surface luminance with all white pixels}}{\text{Surface luminance with all black pixels}}$$

- 2) **Surface Luminance(L_{WH})** is the luminance value at center 1 point(1) across the LCD surface 50cm from the surface with all pixels displaying white. For more information see FIG.4-1. **(By PR880)**

- 3) The **Variation in Surface Luminance** , δ_{WHITE} is defined as: **(By PR880)**

$$\delta_{\text{WHITE}} = \frac{\text{Minimum}(LP1, LP2, \dots, LP9)}{\text{Maximum}(LP1, LP2, \dots, LP9)} \times 100(\%)$$

Where L1 to L9 are the luminance with all pixels displaying white at 9 locations.

Notes:

- 4) The **Gray To Gray Response Time** is defined as the following figure and shall be measured by switching the input signal for "Gray To Gray ". (*By RD80S*)
- Gray step: 5 Step
 - T_{GTG_AVR} is the total average time at rising time and falling time for "Gray To Gray ".
 - For the GTG measurement, the sampling rate of oscilloscope is 500k/s.

Notes:

- 5) **Viewing Angle** is the angle at which the contrast ratio is greater than 10. The angles are determined for the horizontal or x axis and the vertical or y axis with respect to the z axis which is normal to the LCD surface. For more information see FIG.4-4. **(By PR880)**

FIG.4-4 Viewing Angle

- 6) **Gamma Value** is approximately 2.2. For more information see below table.

5. Mechanical Characteristics

The contents provide general mechanical characteristics. In addition the figures in the next page are detailed mechanical drawing of the LCD.

Outline Dimension	Horizontal	497.6mm
	Vertical	292.2mm
	Depth	10.5 mm
Bezel Area	Horizontal	479.8mm
	Vertical	271.3mm
Active Display Area	Horizontal	476.064 mm
	Vertical	267.786 mm
Weight	1685g(Typ.), 1770g(Max.)	
Surface Treatment	Anti-glare treatment of the front polarizer (Haze 25%, 3H)	

Note: Please refer to a mechanical drawing in terms of tolerance at the next page.

- Outline dimensions (horizontal, vertical and outside depth) are measured by using vernier calipers.
- The inside depth dimensions are measured by using height gauge, when LCM is put face down onto a flat surface.

Notes

1. Unspecified tolerances are to be ± 0.5
2. Tilt and partial disposition tolerance of display area are as following.
 - (1) Y-direction : $|A-B| \leq 1.0$
 - (2) X-direction : $|C-D| \leq 1.0$

3. Torque of User Hole(Mount) : 3.0 ~4.0kgf.cm
4. I/F Connector Specification : IS100-L300-C23(UJU)
5. LED Connector Specification : 10035WR=H06D(HF)
6. The COF area is weak & sensitive, so please don't press the COF area

LGD Highly recommendation :

As The IPS panel is sensitive & slim, please recommend the metal frame of the system supports the panel by the double side-mount.

5	Humidity condition operation	$T_a = 40^{\circ}\text{C}$, 90%RH	1
6	Vibration test (non-operating)	Waveform : Random Vibration level : 1.0Grms Bandwidth : 10-300Hz Duration : X,Y,Z, 10min One time each direction	
7	Shock test (non-operating)	Shock level : 100G Waveform : Half sine wave, 2ms Direction : $\pm X$, $\pm Y$, $\pm Z$ One time each direction	
8	Altitude Operating Storage / Shipment	0 - 10,000 feet (3,048m) 0 - 40,000 feet (12,192m)	
9	Maximum storage humidity for 4 corner light leakage Mura	Max 70%RH, $T_a = 40^{\circ}\text{C}$	

Note 1) Result Evaluation Criteria:

TFT-LCD panels test should take place after cooling enough at room temperature.

In the standard condition, there should be no particular problems that may affect the display function.

Product Specification**9. PRECAUTIONS**

Please pay attention to the followings when you use this TFT LCD module.

9-1. MOUNTING PRECAUTIONS

- (1) You must mount a module using holes arranged in four corners or four sides.
- (2) You should consider the mounting structure so that uneven force (ex. Twisted stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- (3) Please attach the surface transparent protective plate to the surface in order to protect the polarizer. Transparent protective plate should have sufficient strength in order to resist external force.
- (4) You should adopt radiation structure to satisfy the temperature specification.
- (5) Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- (6) Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
Do not touch the surface of polarizer for bare hand or greasy cloth. (Some cosmetics are detrimental to the polarizer.)
- (7) When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzene. Normal-hexane is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene and alcohol because they cause chemical damage to the polarizer.
- (8) Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading.
- (9) Do not open the case because inside circuits do not have sufficient strength.
- (10) As The IPS panel is sensitive & slim, please recommend the metal frame of the system supports the panel by the double side-mount.

9-2. Operating Precautions

- 1) Response time depends on the temperature. (In lower temperature, it becomes longer.)
- 2) Brightness depends on the temperature. (In higher temperature, it becomes lower.) And in lower temperature, response time (required time that brightness is stable after turned on) becomes longer.
- 3) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- 4) When fixed patterns are displayed for a long time, remnant image is likely to occur.
- 5) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- 6) Please do not give any mechanical and/or acoustical impact to LCM. Otherwise, LCM can't be operated its full characteristics perfectly.
- 7) A screw which is fastened up the steels should be a machine screw. (if not, it causes metallic foreign material and deal LCM a fatal blow)
- 8) Please do not set LCD on its edge.
- 9) When LCMs are used for public display, defects such as Yogore & image sticking can not be guaranteed.
- 10) LCMs cannot support "Interlaced Scan Method"
- 11) When this reverse model is used as a forward-type model (PCB on top side) or a Portrait-type mode at storage and operation, LGD can not guarantee any defects of LCM.
- 12) Please conduct image sticking test after 2-hour aging with Rolling Pattern at normal temperature. (25~40℃)

Product Specification**9-3. Electrostatic Discharge Control**

Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly.

9-4. Precautions For Strong Light and Hazardous Materials Exposure

Strong light exposure causes degradation of polarizer and color filter.

The LCM should be avoided direct contact with hazardous materials such as sulfur, acetic acid, chlorine, etc. These materials may cause chemical reaction such as sulfurization, corrosion, discoloration, etc.

9-5. Storage

When storing modules as spares for a long time, the following precautions are necessary.

- 1) Store them in a dark place. Do not expose the module to sunlight or fluorescent light. Keep the temperature between 5°C and 35°C at normal humidity.
- 2) The polarizer surface should not come in contact with any other object.
It is recommended that they be stored in the container in which they were shipped.

9-6. Handling Precautions For Protection Film

- 1) The protection film is attached to the bezel with a small masking tape. When the protection film is peeled off, static electricity is generated between the film and polarizer. This should be peeled off slowly and carefully by people who are electrically grounded and with well ion-blown equipment or in such a condition, etc.
- 2) When the module with protection film attached is stored for a long time, sometimes there remains a very small amount of glue still on the bezel after the protection film is peeled off.
- 3) You can remove the glue easily. When the glue remains on the bezel surface or its vestige is recognized, please wipe them off with absorbent cotton waste or other soft material like chamois soaked with normal-hexane.
