1. Application

This specifications applies to a color TFT-LCD module, LQ150X1DG16.

©The device listed in these specification sheets was designed and manufactured for use in OA equipment .

©In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken .

©Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support .

©SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets .

©Contact and consult with a SHARP sales representative for any questions about this device .

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed 1024×3×768 dots on a panel with 262,144 colors by supplying 36 bit data signals(6 bit×2pixel×RGB), four timing signals, +5V DC supply voltage for TFT-LCD panel driving and supply voltage for back light .

It is a wide viewing-angle-module (Vertical viewing angle:120° Horizontal viewing angle:140°).

Input signal timing conform with 75Hz mode of VESA standard.

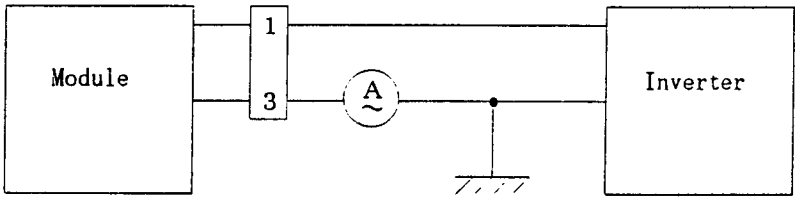
6-2. Back light driving

The back light system is an edge-lighting type with a couple of CCFT (Cold Cathode Fluorescent Tube). The characteristics of the lamp are shown in the following table .

The value mentioned below is at the case of one CCFT .

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Lamp current range	I_L	2.5	6.0	6.5	mArms	【Note1】
Lamp voltage	V_L	—	690	—	Vrms	Ta=25℃
Lamp power consumption	P_L	—	4.1	—	W	【Note2】
Lamp frequency	F_L	20	60	70	KHz	【Note3】
Kick-off voltage	Vs	—	—	850	Vrms	Ta=25℃ 【Note4】
		—	—	1450	Vrms	Ta=0℃ 【Note4】
Lamp life time	L_L	50000	—	—	hour	【Note5】

【Note1】 A lamp can be light in the range of lamp current shown above .
Maximum rating for current is measured by high frequency current measurement equipment connected to V_{LOW} at circuit showed below . (Note : To keep enough kick-off voltage and necessary steady voltage for CCFT .)
Lamp frequency : 20～60kHz
Ambient temperature : 0～50℃



* 3pin is V_{LOW}

【Note2】 Referential data per one CCFT by calculation ($I_L \times V_L$).
The data doesn't include loss at inverter .

【Note3】 Lamp frequency of inverter may produce interference with horizontal synchronous frequency, and this may cause horizontal beat on the display. Therefore, adjust lamp frequency, and keep inverter as far as from module or use electronic shielding between inverter and module to avoid interference.

【Note4】 The voltage above this value should be applied to the lamp for more than 1 second to startup. Otherwise the lamp may not be turned on .

【Note5】 Lamp life time is defined as the time when either ① or ② occurs in the continuous operation under the condition of Ta=25℃ and I_L=6.0±0.5mArms .

① Brightness becomes 50% of the original value under standard condition .

② Kick-off voltage at Ta=0℃ exceeds maximum value, 1450Vrms .

《Note》 The performance of the back light, for example life time or brightness, is much influenced by the characteristics of the DC-AC inverter for the lamp .When you design or order the inverter, please make sure that a poor lighting caused by the mismatch of the back light and the inverter (miss-lighting, flicker, etc.) never occurs . When you confirm it, the module should be operated in the same condition as it is installed in your instrument .

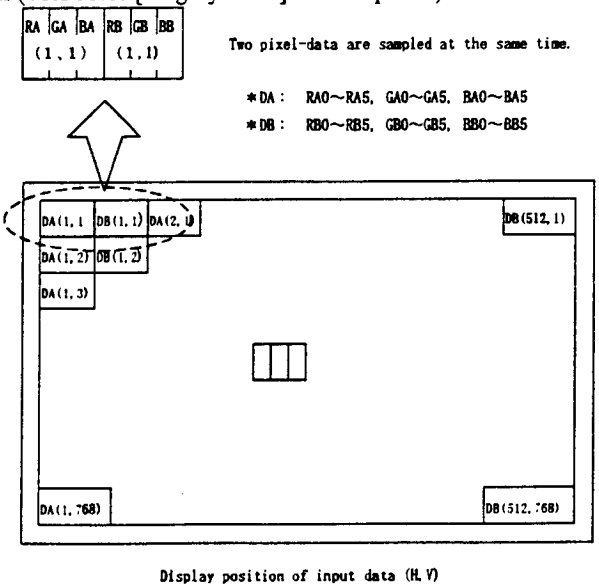
【Note】 In case of using the long vertical period, the deterioration of display quality, flicker etc., may be occurred.

7-3. Input Data Signals and Display Position on the screen

Graphics and texts can be displayed 1024 × 3× 768 dots on a panel with 262,144 colors by supplying 36 bit data signal (6bit/color [64 gray scale] x 3 x 2 pixels) .



Display position of input data (H, V)

7-4. Sleep Mode

This LCD module stops operation, and the picture of the LCD module becomes wholly white, if ENAB signal stays "Low" for over 0.5 sec. Follow the above input signal timing for normal operation.

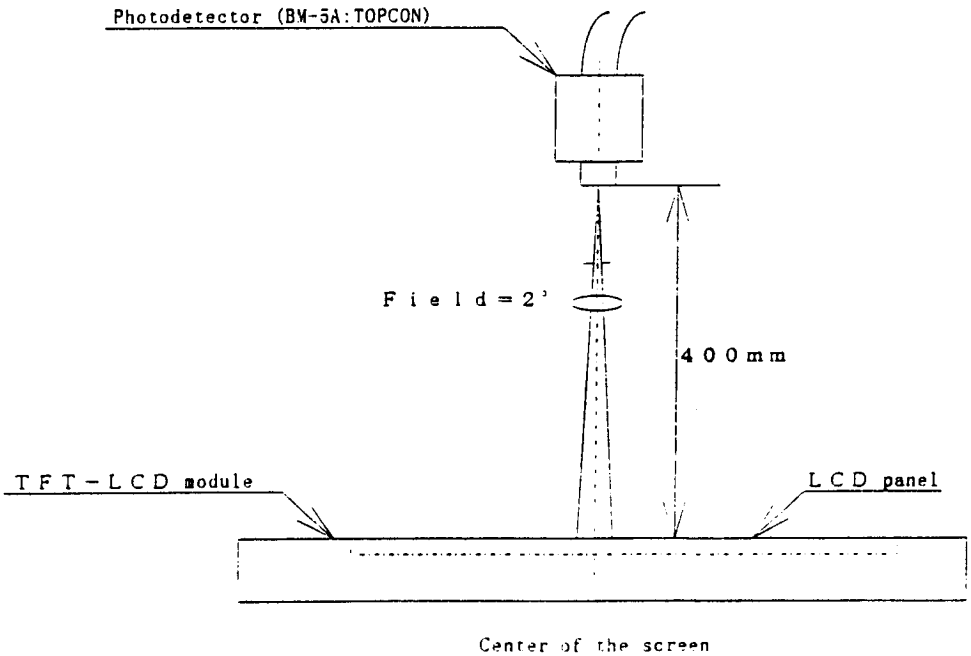
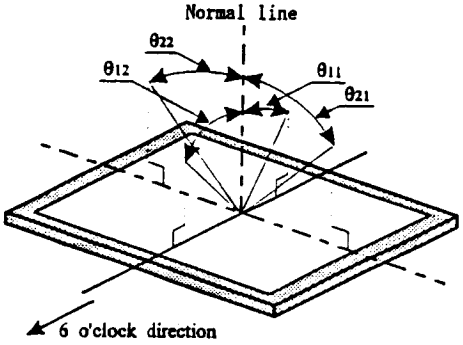
※The measurement shall be executed 30 minutes after lighting at rating .

(typical condition:I_L=6.0mArms)

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.4 below .



【Note1】 Definitions of viewing angle range:



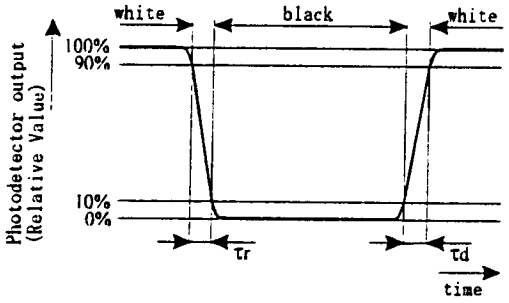
【Note2】 Definition of contrast ratio:

The contrast ratio is defined as the following .

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】 Definition of response time:

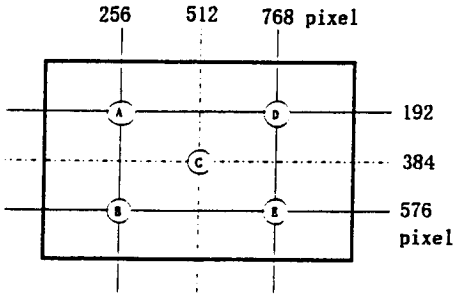
The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white" .



【Note4】 This shall be measured at center of the screen .

【Note5】 Definition of white uniformity:

White uniformity is defined as the following with five measurements (A~E) .



$$\delta_W = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$

10. Handling Precautions

a) Be sure to turn off the power supply when inserting or disconnecting the cable .

b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist .

c) Since the front polarize is easily damaged, pay attention not to scratch it .

d) Since long contact with water may cause discoloration or spots, wipe off water drop immediately .

e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth. .

f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care .

g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling .

h) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed .

i) Observe all other precautionary requirements in handling components .

j) At lamp unit exchange , the screw behind the module need to be removed . So , please consider the necessity for cabinet design .

k) When some pressure is added onto the module from rear side constantly , it causes display non-uniformity issue , functional defect , etc . So , please avoid such design .

l) Duaring the module aging , don't put protection film on the module surface.

11. Packing form

a) Piling number of cartons : 5 cartons

b) Packing quantity in one carton : 5 modules

c) Carton size : 410mm (W)×500mm (D) ×255mm (H)

d) Total mass of one carton filled with full modules : 8850 g

e) Packing form is shown in Fig .5

12. Reliability test items

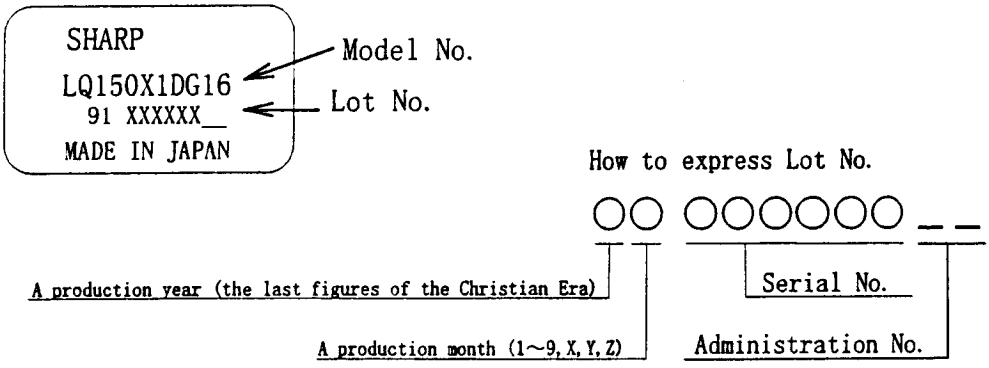
No.	Test item	Conditions
1	High temperature storage test	Ta=60℃ 240h
2	Low temperature storage test	Ta=-25℃ 240h
3	High temperature & high humidity operation test	Ta=40℃ ; 95%RH 240h (No condensation)
4	High temperature operation test	Ta=50℃ 240h (The panel temp. must be less than 60℃)
5	Low temperature operation test	Ta=0℃ 240H
6	Vibration test (non- operating)	Frequency : 10～57Hz/Vibration width (one said) : 0.075mm : 58～500Hz/Gravity : 9.8m/s^2 Sweep time : 11minutes Test period : 3 hours (1 hours for each direction X,Y,Z)
7	Shock test (non- operating)	Max, gravity : 490m/s^2 Pulse width : 11 ms, sine wave Direction : ±X,±Y,±Z once for each direction

【Result Evaluation Criteria】

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function .

13. Others

1) Lot No. and indication Label:



2) Adjusting volume have been set optimally before shipment, so do not change any adjusted value . If adjusted value is changed, the specification may not be satisfied .

3) Disassembling the module can cause permanent damage and should be strictly avoided .

4) Please be careful since image retention may occur when a fixed pattern is displayed for a long time .

5) When any question or issue occurs , it shall be solved by mutual discussion .
