1. Application

This specification applies to the color 28.3 QSXGA TFT-LCD module LQ283G1TW11.

◎The device listed in these specification sheets was designed and manufactured for use in OA equipment.

◎In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

◎Do not use the device for equipment that requires an extremely high level of reliability, such as medical equipment for life support.

◎SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.

◎Contact and consult with a SHARP sales representative for any questions about this device.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). The wide vision can be realized in this module with SHARP original technology. It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a back light unit. Graphics and texts can be displayed on a 2560×3×2048 dots panel with about 16.77 million colors (8 bit) by supplying 192 bit data signals(8bit×2pixel×RGB×4), one display enable signal, and one dot clock signal by TMDS, and +12V DC supply voltages for TFT-LCD panel driving and back light. The backlight inverter is built into this module.

3. Mechanical Specifications

Parameter	Specifications	Unit
Display size	71.8 (Diagonal)	cm
	28.3 (Diagonal)	Inch
Active area	560.64 (H)×448.512 (V)	mm
Pixel format	2560 (H)×2048 (V)	Pixel
	(1 pixel=R+G+B dots)	
Pixel pitch	0.219 (H)×0.219 (V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally Black	
Unit outline dimensions *1	640 (W)×530 (H)×60(D)	mm
Mass	（15 max）	kg
Surface treatment	Anti-glare and hard-coating 2H	

*1.Note: excluding back light cables.

The thickness of module (D) doesn't contain the projection.

Outline dimensions are shown in Fig.1.

【Note】It is the alarm output terminal under abnormal backlight condition. High voltage output(5.0V) is produced when a lamp is burned out and/or a lamp connecter is opened in one place or more. (But this signal can’ t specify an abnormal spot.)

Normal condition : Vst level is LOW.(GND)

Abnormal condition : Vst level is HIGH.(5.0V)

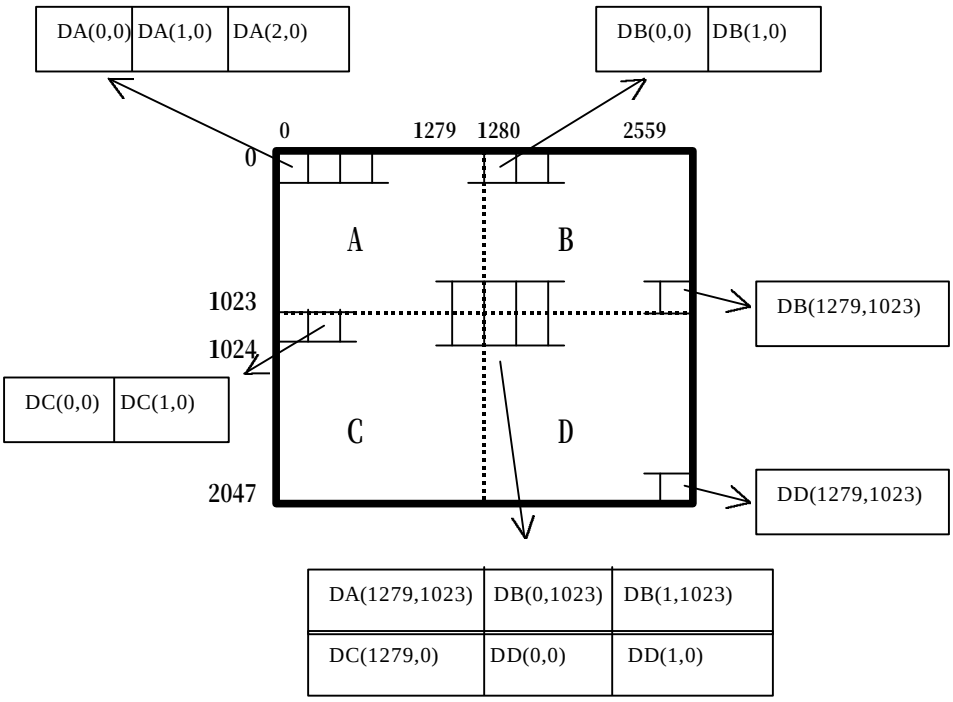
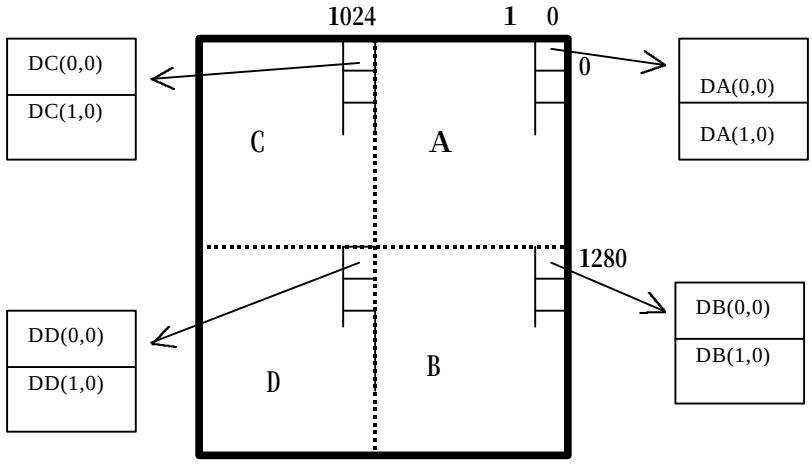
R and G are similar.

Relation between screen and pixel data

1. Horizontal (default) position (PDR = L)



2. Turn to vertical position (PDR = H)



PDR switch is located near close to CN in the backside of TFT module, as shown " SW" in Fig.1. It is normally set at " L" side.

2) Voltage sag

Vcc(Vcc_12V,B/L_12V):

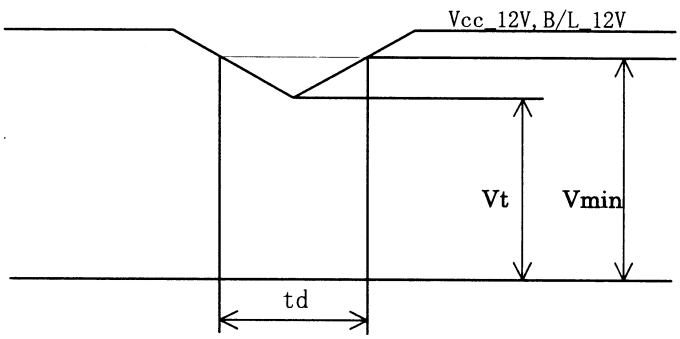
Vmin =11.4V , Vth =9.6V

i . Vth ≦Vcc< Vmin :

td≦20ms

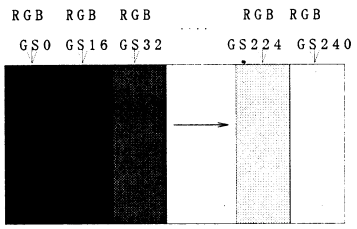
ii . Vcc< Vth :

Refer to *1



*1 When Vcc(Vcc_12V,B/L_12V) goes down to Vth level and below, the module stops operating. Please follow the sequence mentioned in 1) and turn on power supply again.

【Note2】 Measurement pattern of amperage



1） Typical power consumption situation: 16 gray-bar pattern

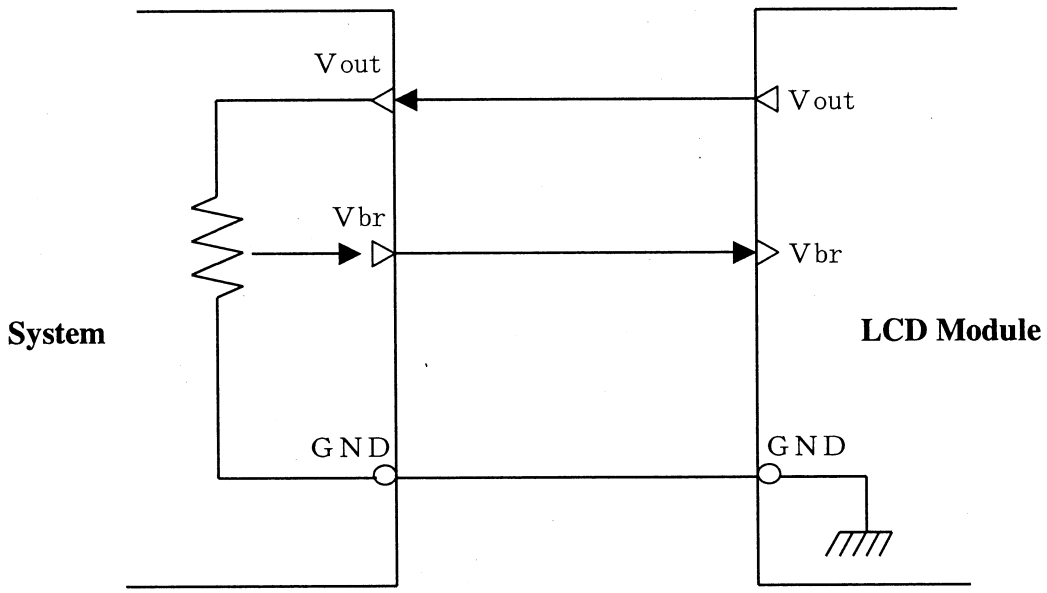
Gray scale: GS(16N)

N=0～15

Explanation of each gray scale, GS(16n) is described below section 8.

【Note3】 Relation between Adjusted voltage Vbr and Display brightness

Adjusted voltage (Vbr)	Min.	◀——▶	Max.
Display brightness	Max. (Dimmer: Max)	◀——▶	Min. (Dimmer: Min)



【Note4】 Lamp life time is defined as the time when brightness becomes 50% of the original value under the condition of Ta=25℃ and brightness dimmer maximum.

7. Timing characteristics of input signals

※The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent condition with the method shown in Fig.2 below.

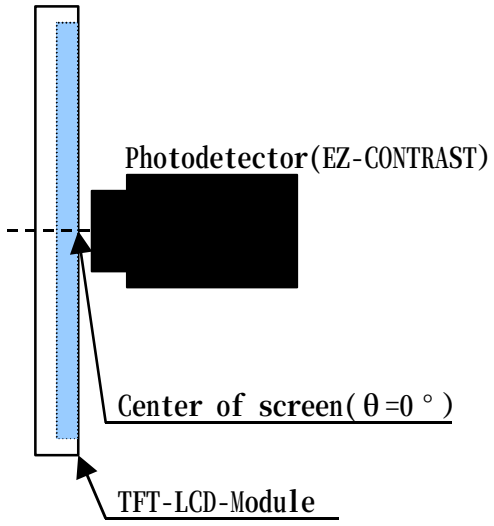

Fig2-1 Viewing angle measurement method

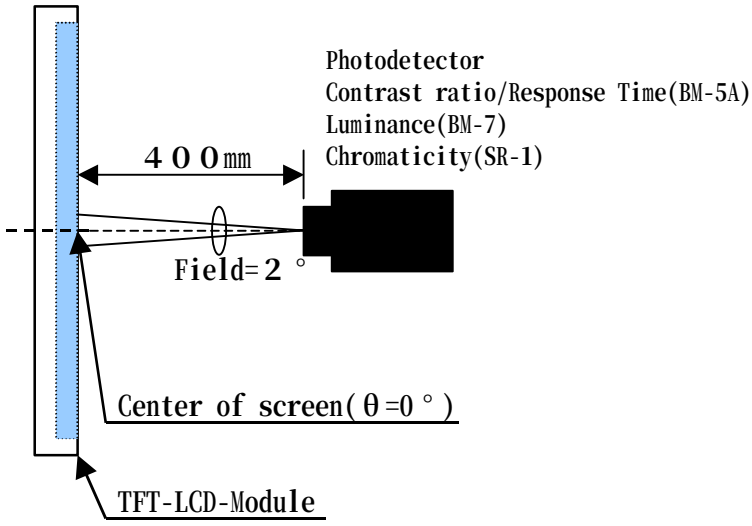

Fig2-2 Luminance/Contrast ratio/Response time/Chromaticity measurement method

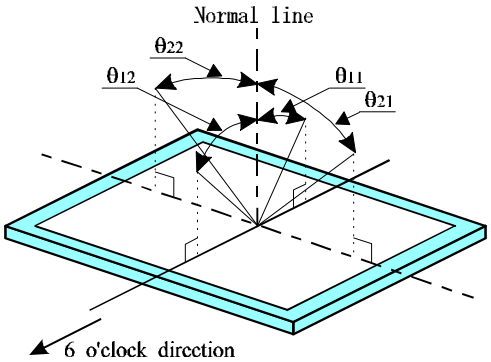
Fig2 Optical characteristics measurement method

【Note1】Definitions of viewing angle range:



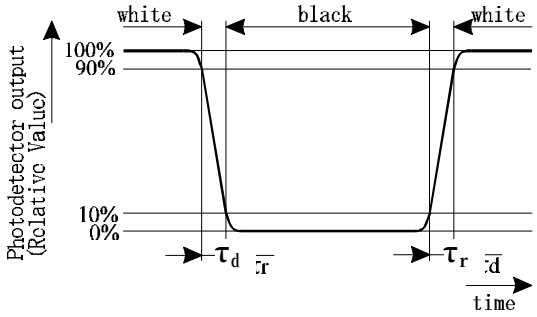
【Note2】Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

【Note3】Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

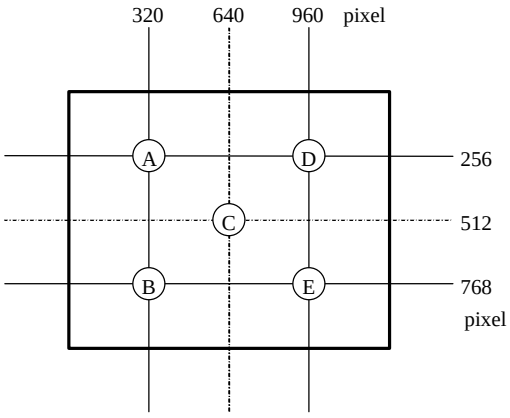


【Note4】This shall be measured at center of the screen.

【Note5】Definition of white uniformity:

White uniformity is defined as the following with five measurements (A～E).

$$\delta_W = \frac{\text{Maximum Luminance of five points (brightness)}}{\text{Minimum Luminance of five points (brightness)}}$$



10. Handling Precautions

a) Be sure to turn off the power supply when inserting or disconnecting the cable from the input connector.
b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
c) Since the fronts polarize is easily damaged, pay attention for handling.
d) The adhesion of water to the module may cause discoloration or spots, wipe it off immediately.
e) In case the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
f) Since the panel is made of fine wires on glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
g) Since CMOS LSI is used in this module, take care of static electricity and take the human earth into consideration when handling.
h) Make sure the four mounting holes of the module are grounded sufficiently. Take electro-magnetic interference (EMI) into consideration.
i) The module has some printed circuit boards (PCBs) on the back. Be sure to avoid them form any stress or pressure when handling or installing the module; otherwise some of electronic parts on the PCBs may be damaged.
j) Observe all other precautionary requirements in handling components.
k) When some pressure is added onto the module from rear side constantly, it causes display non-uniformity issue, functional defect, etc. So, please avoid such design.
l) When giving a touch to the panel while turning on the power supply, it may cause degradation. In that case, once turn off the power supply, and turn on again after several seconds, and then degradation is disappeared a few seconds after turning on again.
m) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.

11. Shipping condition

a) Maximum number of carton over which can be stacked: (maximum 8 cartons)
b) Maximum quantity in a carton : 1 set
c) Carton size : (751*641*200)
d) Gross weight for 1 set : (TBD)

Packing drawing is shown in Fig. 3.

12. Reliability test items

No.	Test item	Conditions
1	High temperature storage test	Ta=60℃ 240h
2	Low temperature storage test	Ta=-25℃ 240h

5	Low temperature operation test	Ta=0℃ 240H
6	Vibration test (non- operating)	Frequency : 10～57Hz/Vibration width (one side) : 0.075mm : 58～500Hz/Gravity : 9.8m/s^2 Sweep time : 11 minutes Test period : 3 hours (1 hour for each direction of X,Y,Z)
7	Shock test (non- operating)	Max. gravity : 196m/s^2 Pulse width : 11ms, sine wave Direction : ±X, ±Y, ±Z, once for each direction.

【Result Evaluation Criteria】

Under the display quality test conditions with normal operation state, these shall be no change that may affect practical display function.

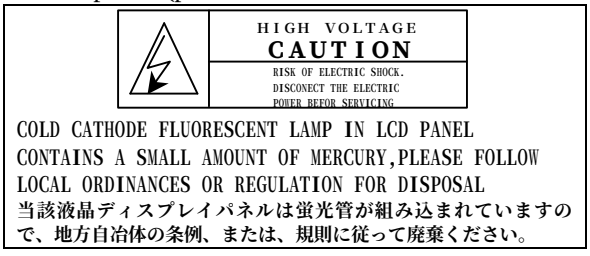
8)Cold cathode fluorescent lamp in LCD PANEL contains a small amount of mercury, Please follow local ordinances or regulations for disposal. (put on the back of the module. Size: 63×25.5mm)



9) When any question or issue occurs, it shall be solved by mutual discussion.

◎ Carton storage condition

Temperature : 0℃ to 40℃

Humidity : 95%RH or less

Reference condition : 20℃ to 35℃ , 85%RH or less (summer)

: 5℃ to 15℃ , 85%RH or less (winter)

・the total storage time (40℃,95%RH) : 240H or less

Sunlight : Be sure to store in unpacked condition or at dark room to avoid direct sunlight.

Atmosphere: : Never leave in a corrosive atmosphere and/or an area that volatile liquids are generated.

Cautions as to condensation:

- Do not put the carton directly on the floor. Be sure to keep on palette or stand. Also, to keep the ventilation of the bottom of pallet/stand well, be sure to place in the same direction properly.
-Be sure to keep away from the wall of warehouse.
- Please take care of ventilation in warehouse by using ventilation system.
- Control the ambient temperature to avoid sudden temperature change.

Storage period : 1 year, in the above conditions.
